SOFTWARE TEST ENGINEER, WBC SOFTWARE LAB (CLIENT: ETRANSX)

HEMI

- Using this engine, we can transmit healthcare data between two different systems. (Hospitals, Radiology, etc)
- It supports more than 20 types of transactions like HL7, File, DB, FTP, Web Service etc.
- it's possible to transfer one format to another.

XCHANGE

- It's a HIE solution from eTransX, enhances care coordination efforts of subscribing healthcare providers through robust clinical data aggregation and the creation of longitudinal community health records.
- It's built upon a reliable application integration infrastructure for the efficient, secure exchange of electronic health information.
- XChange's greatest strength is its ability to effortlessly aggregate and share clinical data within facilities and across networks.
- It enables care providers to exchange health information as never before, empowering collaboration to create both healthier patients and healthier bottom lines.

CARE COMMUNITY

- The flexibility of the CC system can support a wide range of community well-being improvement initiatives across many focus areas.
- Capture and share actionable information to support your community's goal of lifting people and families out of poverty.
- Help your community solve the challenges facing today's children and youth and their caregivers through a community-wide cross sector approach.
- Address the complex challenges of the opioid/substance abuse crisis through a systemic approach across all levels – prevention, treatment, and recovery.
- Improve health outcomes by addressing the other 80-90% of factors that contribute to a person's overall health.

RULE ENGINE

- It can automate the redundant task with an engine called "Rule Engine".
- Using analytics can transform the data into an actionable view. The care coordination integrates the workflow using automated rules.
